

POLIESTER PAD

Great result, long service life!

POLIESTER PAD is a pad with **high mechanical cleaning performance** and **long service life** on various mineral and elastic floor coverings, such as fine stoneware, natural stones, structured tiles, vinyl, linoleum, rubber studded coverings, etc..

Properties

The fine polyester fibres have a high mechanical cleaning effect and remove the dirt from the surface. The dirt does not stick to the fibre, remains in the loosened dirt and can therefore be vacuumed up with the scrubber machine. Unlike with a pure microfibre pad, the fibres do not become soiled.

The Polyester Pad can usually be mounted on the driving plate until the fine fibre is completely worn out. Washing is not necessary, but can nevertheless be carried out in the washing machine up to 60° C without any problems, e.g. object-specifically for use in hospitals or with heavy dirt in the winter months. The longevity is due to the high-quality polyester and back materials as well as the clean workmanship. The highly stressed edge area is sewn with edging tape and quilting seam.

When using MelaminPlusPads alternately, basic cleaning can be avoided.

EFFECTIVE ON NUMEROUS TYPES OF FLOOR COVERINGS

Excellent cleaning results on mineral and elastic floor coverings.

IMMEDIATE COST SAVINGS

Impressive cleaning results with less work overhead.
Very long service life.

ENVIRONMENTALLY-FRIENDLY

Long service life and economical use of the cleaning solution.
Easy cleaning in the washing machine.
